

TouchMix Compact Digital Mixer

TouchMix-8 | TouchMix-16

Features

- TM-16 with 20 full-function inputs (16 mic/line, 2 stereo line)
- TM-8 with 12 full-function inputs (8 mic/line, 2 stereo line)
- 4-band full parametric EQ, variable high-pass and low-pass filters on all input channels.
- Gate and compressor on all input channels.
- 4 professional quality stereo DSP effects plus a pitch corrector.
- 1/3 octave graphic equalization, limiters, delay and notch filters on main and aux. outputs.
- 8 DCA and 8 Mute groups.
- Color, capacitive touch screen graphical user interface combined with hardware controls for fast and intuitive operation.
- Wizards, info and preset libraries assist the user with channel setup, proper gain adjustment, effects selection and more.
- Monitor mixes: TM-16, 6 mono plus 2 stereo, TM-8, 4 mono.
- Drives wired In Ear Monitors (IEM) directly.
- Direct to hard-drive recording and playback of multi-track wave files.
 Capable of recording all input channels plus a user-selected stereo output pair.
- Remote control via mobile devices. Wi-Fi interface included.

QSC TouchMix mixers are designed for musicians, production professionals and live performance venues that need the power and capability of a large "concert" mixing console in a compact, affordable and easy to use form. TouchMix-8 and TouchMix-16 mixers have the functionality to satisfy demanding professionals combined with a range of features and functions that help the less experienced user achieve quality results.

"Big Mixer" Features and Specifications

Professional live sound reinforcement engineers have come to expect functionality such as four bands of fully parametric EQ, variable high and low-pass filters, compressors and gates on every channel. They rely on multiple, high quality digital effects. They expect equalization, limiting and delay on all the outputs as well as the control that DCA and mute groups provide. And they expect pristine audio quality throughout the audio path of the mixer, including lowdistortion, class-A microphone preamps and professional grade converters for all inputs and outputs. With TouchMix's, "no asterisk" specifications, there are no tradeoffs - just great performance.

Fast, Professional Results for Everyone

Digital cameras have 'point and shoot' features to help casual users achieve results approaching those of skilled photographers. At the same time, these cameras offer all the features an advanced photographer wants. With this in mind, the TouchMix design team set out to create a mixer that does for live sound what 'point and shoot' technology has done for photography. Many TouchMix functions such as EQ, compressors, gates and limiters offer you a choice of **Advanced Mode** operation that offers total control over all parameters or **Simple Mode** that provides only the most essential controls.

There's also a comprehensive library of **Channel Presets**. These are not typical, generic, one-size-fits-all settings developed in a recording studio. Experienced, live sound engineers spent months working with musicians, all manner of instruments, popular microphones and pickups and multiple speaker systems to develop a library

of settings that are specifically designed for live sound reinforcement. In addition, the onboard **Effects Wizard** guides you through the selection and assignment of appropriate effects while the **Gain Wizard** continuously monitors and displays input clipping, allowing you to focus on your performance. The TouchMix also comes with a comprehensive library of complete **Mixer Scenes** to get you started. User scenes may be stored or recalled from either internal or USB memory and at the user's option, scenes may include or omit main and auxiliary mix levels.

Compact and Complete

TouchMix mixers are completely self-contained. They require no external PC or video display. The **graphic, color touch-screen** provides display of and access to mix parameters. Mixer parameters may be adjusted on the screen or via the physical rotary encoder. Frequently used functions can be accessed or controlled using hardware buttons.

TouchMix may also be controlled remotely by means of Wi-Fi connection to wireless iOS devices. The available **Remote Control App** controls all mixer parameters and the mixer **includes a WiFi adapter** that creates the network connection between the mixer and the hand-held device. No external network hardware is required.

To sound their best, musicians need to hear themselves. With four (TouchMix-8) or ten (TouchMix-16) auxiliary output channels, TouchMix has ample stage monitor mixing capability. Both models have the ability to **drive multiple, wired stereo in-ear monitors directly.**

TouchMix is also capable of **direct recording to an external USB hard drive** – no external computer is required. All inputs plus a stereo mix are created in 32-bitbroadcast wave format. Tracks can also be played back on the mixer or imported into most DAW software for over-dubs and post production.

Finally, the TouchMix comes complete with its own **padded carrying case**, for transport and protection. Wherever your music takes you, the TouchMix will be there, ready to take the stage to help you achieve the most ideal sound for your audience.
